Aspergillus terreus recombinant fructosyl:amino acid oxidase - used for analysis of "Amadori" compound(s).

Example 1; Col 23-26; 18pp; Japanese.

This sequence encodes a novel recombinant fructosylamino acid oxidase (FAOD-L) produced from enkaryotic cells integrated with an RT-FCR product encoding FAOD-L derived from Aspergillus terreus GP1 (FERM P-15664). FAOD-L can be used for the analysis of "Amadori" compounds

Sequence 1314 BP; 294 A; 371 C; 395 G; 254 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This nucleotide sequence encodes an Aspergillus terreus heat-resistant (thermostable) fructosyl amino acid oxidase (FAOD). FAOD can be produced using standard recombinant methodology. A recombinant fusion protein comprising FAOD and glutathione S-transferase (GST) is useful for the analysis of Amadori compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CCCTGCATCTTGCCCGCAGAGGATACACCAATGTCACTGTCCTTGACCCGTACCCGGTTC

This cDNA sequence comprises a coding region for an Aspergillus terreus fructosyl amino acid oxidase (FAAO, see AAW3141), designated FAOD-L, that shows higher FAAO activity on fructosyl lysine than on fructosyl value. Total RNA of a terreus GPI was subjected to PCR using primers (see AAV00733-34) based on the partial amino acid sequence of native FAOD-L. The resulting 400 bp PCR fragment was used to screen an A. terreus CPI cDNA library. DNA excised from positive clones was used to transform plasmid pFAL2 that included the 1314 bp coding region. E. coli SOLR containing pFAL2 that included the 1314 bp coding region. E. coli SOLR containing pFAL2 was deposited as FERM BP-5981. The invention provides recombinant FAAO, DNA encoding the FAAO, an expression vector containing the DNA, a transformed by the vector, and a method of preparing recombinant FAAO by culturing the transforment. The FAAO can be used in assays for, e.g. determination of amadori compounds such as cultural, diagnosis and monitoring of diabetes or quality control of foods. (Updated on 17-OCT-2003 to standardise OS field)

The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of deoxycholic acid or amide, cholic acid amide octyl glucoside, quaternary ammonium salt, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a concanavalin A and betaine and/or ascorbic oxidase and a buffer without a compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound proportion of albumin into glycoalbumin with respect to the other albumin measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and steabilise enzymes such as protease acting on glycoamino acids. This sequence represents DNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ω,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
4-(2-hydroxyethyl)-1-piperazinyl group. The invention also relates to compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-S bond and bromcorseol purple for evaluation of glycation proportion of albumin into glycoalbumin with respect to the other albumins measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease acting on glycoamino acids. This sequence represents DNA encoding a polypeptide used in the scope of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            430

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of decoxycholic acid or amide, cholic acid ande octyl glucoside, quaternary ammonium salt, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a to "to the propositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-S bond and bromocresol purple for evaluation of glycation to proportion of albumin into glycoalbumin with respect to the other albumins measured separately. The compositions are useful in clinical examination including diagonsis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease acting on glycoamino acide. This sequence represents DNA encoding a polypeptide used in the scope of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Compositions for assaying glycoprotein without interference from globulin and ascorbic acid in blood, useful in clinical examination including diagnosis and management of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            430

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of deoxycholic acid or amide, cholic acid amide octyl glucoside, quaternary ammonium salt, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a 4 (2-hydroxyethyl) 1-piperazinyl group. The invention also relates to compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-S bond and bromocresol purple for evaluation of glycation having S-S bond and bromocresol purple for evaluation of glycation cate albumin into glycoalbumin with respect to the other albumins measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease acting on glycoamino acids. This sequence represents DNA encoding a polypeptide used in the scope of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Compositions for assaying glycoprotein without interference from globulin and ascorbic acid in blood, useful in clinical examination including diagnosis and management of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          161 GCGCCATCTCCGCCGGAAACGACGAGAAGTCATTAGCAGTGGCCAATATTCGAATA 220

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel fructosylamine oxidase isolated from Pusarium proliferatum. The enzyme has the following physiochemical characteristics: (a) activity against fructosyllysine equivalent to or higher than that against fructosylvaline; (b) optimum pH for enzyme activity of 7.5; (c) enzyme stability optimally at 30-40 deg C; and (d) a molecular weight of about 39 kba as measured by SDS-PAGE and about 39.4 kba by gel filtration. Also disclosed is a similar Fructosylamine oxidase characterized by: (i) activity against fructosylvaline and no detectable activity against fructosylvaline and no detectable activity against fructosylvaline and no detectable activity against fructosylvaline and is modecular weight of about 49 kba as measured by SDS-PAGE and about 58 kba by gel filtration. The oxidases are useful in the measurement of Amadori compounds and particularly applicable in medical examination including for treatment and prevention of Galabetes by controlling serum glucose level for treatment and prevention of complications, and in food inspection. This sequence represents the coding sequence for the fructosylamine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1092                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to fructosylamine oxidase protein (I; ADS15771) and its coding sequence (II; ADS15772) from Pichia sp. preferably Pichia sp. NI-1 strain. (I) is useful for spectrosocpic analysis of fructosylamine compounds, and electrochemical analysis of fructosylamine compounds. (I) is also useful for analyzing fructosyl valine by spectroscopy, which involves degrading HbAlc, fructosamine or glycoalbumin in a sample using (I) to produce fructosylamine, respectively. (I) is also useful for carrying out electrochemical analysis of HbAlc, fructosamine, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel fructosylamine oxidase protein, useful for spectroscopic analysis of fructosylamine compounds, and electrochemical analysis of fructosylamine and fructosyl valine compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fructosylamine oxidase; enzyme; fructosylamine; fructosyl valine; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a DNA sequence (I, ADE81173), which is associated with ML-255B synthesis. (I) is useful for improving ML-236B production in a HMG-COA reducing-enzyme-inhibitor ML-236B producing microbe. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATTACGGGCGAGTGCAAGGGAGTCGTCACAGCAGATGTGCACGAGACACGAGATGTG

The present sequence is the coding sequence of Eupenicillium terrenum ATC 18547 cDNA encoding a novel fructosyl peptide oxidase (FPO). The CDNA was obtained by FOR and RACE amplification using primers based on peptide fragments of the purified enzyme. It is deposited in plasmid purces that the presence of oxygen and catalyse a reaction that produces alpha-ketoaldehyde, valyl histidine and hydrogen peroxide. The E. terrenum FPO exhibits 182% relative activity for fructosyl glycine and 9.78% for epsilon fructosyl lysine when compared to 100% activity for curchapy valyl histidine. It shows optimal activity in the phrange 6.0- The Km value for fructosyl valyl histidine. It shows optimal activity in the phrange 6.0- 3.00 and at temperatures up to about 45 degrees c. The Km value for fructosyl valyl histidine is 4.25 mm. The E. terrenum CDNA can be used for mass production of the enzyme by recombinant methods. Stable FPO enzymes usuch as E. terrenum FPO are useful in clinical diagnosis, e.g. of diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      947 CCTACCCTGATGCCTCCGAAGTCACCATACGCAAAGCGATCGCAAGGTTCCTGCCAGAAT 1006
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1007 TTAAAGACAAGGGCTCTTCAACCGTACCATGTGCTGGTGTACAGATACGGCCGATGCTA 1066
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1067 ACTTATTGATTTGCGAACACCCGAAGTGGAAGAATTTCATTCTGGCCACTGGAGATAGCG 1126

This sequence represents the coding sequence for the fructosyl amino acid oxidase (RAOD-P) of the invention. This sequence was isolated from Penicillium janthinellum 8-3413 (FERM BP-5475). FAOD-P oxidises amadori compounds in the presence of oxygen, producing alpha-kercaldehyde, amine derivatives and hydrogen peroxide. FAOD-P is used in the detection of smadori compounds in, e.g. foods such as soy sauce, and in body fluids such as blood. This sequence, vectors containing it and host cells transformed by the vector are all used for the recombinant production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fructosyl amino acid oxidase which oxidises amadori compounds and related DNA - used for detection of amadori compounds in foods and in body fluids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              724 GCTCATATCCAACTCACGCCCAAGAATCGGCCCAGTACAAGGACGTGCCCGTAGTATAC 783

The present sequence is a synthetic sequence, derived from the wild type FAOD-P sequence of Penicillium janthinellum S-3413. The sequence was constructed using primers AAX15951-6006
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA coding fructosylamino acid oxidase - synthetically designed and

Submitted (08-SEP-2000) Genoscope - Centre National de Sequencage, 2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (E-mail: sequefedgenoscope.cns.fr - Web: www.genoscope.cns.fr)
This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveromyces thermotolerans, Kluyveromyces textonia, and saccharomyces handenia, and saccharomyces handenia var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See the other extremity of this insert.

This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1037

/note="Vector: pBluescriptSK-; Site 1: EcoRI; Site 2:

XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.

Nitrogen starvation library. Cells were inoculated into minimal medium and grown for two days with shaking (150 rpm) at room temperature. Culture was harvested, blended, inoculated into minimal medium baseled with water and inoculated into minimal medium base lacking nitrogen source for 6 h. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence was trimed according to the alignment, otherwise sequence guality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    79                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
